

## **DATA DIFFUSION PROCESSING TECHNIQUE**

### **ABSTRACT OF THE DISCLOSURE**

A data diffusion processing technique includes the steps of a)

5   dividing a zone into a number of positions and giving a respective  
default value to each of the positions; and b) assigning one of the  
positions to be the triggering position and then using the assigned  
triggering position as the initial position to diffusely transfer data  
from the triggering position to at least one target position in a

10   diffusion direction, for enabling each of the at least one target  
position to receive the diffusion data from the triggering position  
and then to diffusely transfer the diffusion data to at least one next  
target position after a relation operation of the default value the  
respective target position with the triggering value of the triggering

15   position to convert the default value of the respective target  
position into a finished value.
